Omniscience is a tool to help you explore the quantitative relationships between items, such as different units of measure, or the sides and angles of a triangle, or the interaction between interest rates and payments in a loan.

Simply tap on any calculator in the front page list. Then, in the calculator, enter the values you know (which will appear in a blue font), and Omniscience will calculate any missing values that it can (which will appear in a black font). If you enter a value that Omniscience does not understand, the font will appear in red and no calculation will take place.

Ⓒ   Clears any fields you have entered and returns the calculator to its initial state

⑦   Displays the Help page for that calculator, if there is one

Omniscience is built using the open source Bicycle calculation framework:
